Dry Ridge, KY 41035

Attention: Mr. Greg Middleton

RE: Contract 1 – Regional Water Reclamation Facility
Williamstown, Kentucky
3D Project No. 170

Dear Greg:

We are writing to acknowledge the quality of the concrete ready mix product and service provided by Grant County Concrete Co., Inc. for the above referenced project. The project required approximately 11,000 cubic yards of 4500 PSI concrete at a value of almost three quarters of a million dollars. Both the quality of product and the service were outstanding. There were some large concrete placements that approached 400 cubic yards. The project required concrete be placed year round, in both very hot and very cold temperatures, with both cold and hot water required at certain times during the project. In addition, there was a mid-range water reducer utilized in the product to better facilitate placement and achieve better consolidation in certain areas.

The project is currently ninety-five percent (95%) complete as it relates to concrete placement. It continues to be a pleasure to work with Grant County Concrete Co., Inc. and we hope to have the opportunity to do so in the future.

Sincerely,

3D Enterprises Contracting Corporation

Mike Klein
Project Executive
